Project Details

Deliverables

- **Project Repository** - you will submit your project by providing me with a link to your github repository.

- **Project Report** - a short (less than two pages) summary of your project as a PDF file, that is entirely reproducible.
- **Project Presentation** (optional for ST441 students) - a 3 minute *lightning* talk to the rest of the class.

The due date for submission of your project repository is **Sunday Dec 2nd** at midnight. Both your report and presentation slides should be part of the repository.

Project presentations will be scheduled for Week 10 during class time.

The **project report** is just a summary document. You will likely have other files in your project that document the technical details of the things you did to complete the project. It is OK to refer a reader of the report to other files in your repository, but the reader shouldn't have to read anything else to understand the primary goals and results of your project.

Rubric

Find the rubric on the class website. Now is a good time to look it over to see how you will be evaluated. Notice the large number of points for **consistent** effort!
